

43-SRTB2-24

Wiring diagram

This unit is designed to run only 1 curtain at a time for the best performance. The transformer is rated for 500 watts 35% duty cycle.

Keep motor leads shorter than 150 feet.

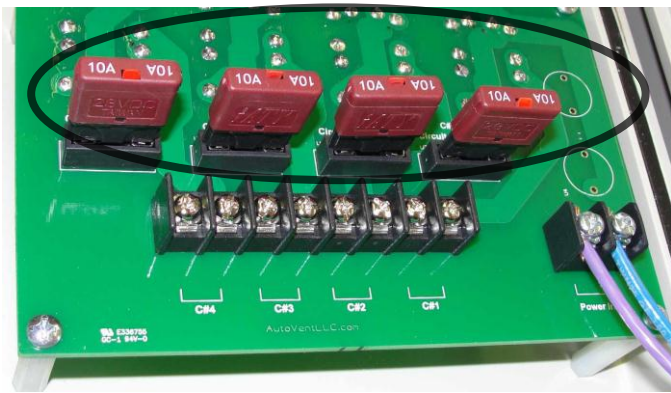

Circuit breakers are not installed
You install them, based on motor size.

24 VDC motors only

Shock hazard. Always remove power before opening box.

There are circuit breakers inside and outside this box.

Inside the box, on the circuit board are small circuit breakers. Each protects a single motor. If tripped, reset by pressing the small tab in.

You have additional amperage circuit breakers along with your unit. Use the circuit breaker recommended by Advancing Alternatives.

Outside, on the bottom, are 2 more circuit breakers. If either of these trip, no motors will run. If tripped, reset by pressing the operator in.
